

Meet Us At the National Dairy Show

If you have never used Nutting Floor Trucks, grasp this opportunity to learn how they are made. See why these sturdy trucks withstand rough, hard, daily use, year after year.

You will appreciate their big, wide flat wheels that save your floors, the patented interlocking corner irons that stay tight, the smooth-wearing hard-

wood platforms, heavy sills and the extra quality and strength throughout. And our prices are lower than similar or inferior trucks.

Our 30 years' experience as floor truck specialists enables us to solve any floor trucking problem. We have or can design the truck to exactly meet your requirements. Write for bulletin E showing more than 300 standard and special designs.

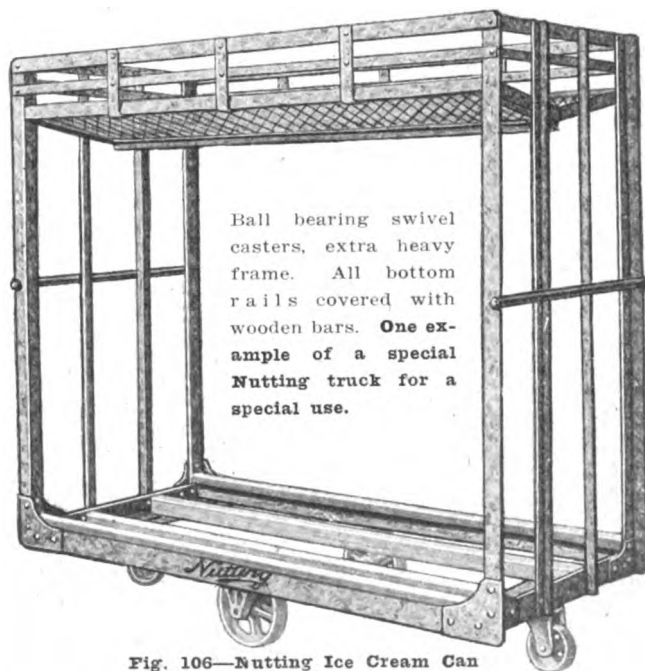

Nutting

Floor Trucks for All Purposes

Fig. 105—Nutting 6-Wheel Balance Truck, for milk cans and heavy freight.

There are just as big differences in floor trucks as there are in automobiles. Buy the truck that will give you lasting service without repairs. Nutting trucks built 30 years ago are still in daily use.

Ball bearing swivel casters, extra heavy frame. All bottom rails covered with wooden bars. One example of a special Nutting truck for a special use.

YOUR HARDEST JOBS

Try This Truck 15

AT LAST—a real milk case truck. One that does away with the back-breaking job of dragging filled cases from place to place;

- that has no nose to pry under or yank out from a pile of heavy cases;
- that soon earns its cost by the saving of wear on case bottoms alone;
- that handles any type or size of milk bottle case made;
- that rolls eight cases of empty bottles or six cases of filled bottles with far less effort than a man can drag half that many.

Note These Features

Fits ALL Cases—
Any size or make.

Simply hook it on

Milk
MILK CASE

No other truck made has the big, outstanding advantages of Nutting. Instead of having a nose to pry under or yank out under a pile of heavy cases, this truck has a patented adjustable hook.

How It Works

You slip the hook into the hand hole or opening of the bottom of the pile, as shown in the photograph. Then push the rack against the cases and away you go.

The rack holds the cases at the proper angle for easiest balance. It takes most of the weight off the handles. Both the hook and the rack are instantly set and held securely in place by heavy teeth.

NOW MADE EASY

Ways at Our Expense

—and away you go.

Nutting

TRUCK

Perfect in Every Detail

The Nutting Milk Case Truck was designed and patented by J. W. Hogander, Manager of the Modern Milk Company, Minneapolis, after several years of practical experiments. It has proved itself by over 4 years of continuous daily use in this and other plants.

It is built by the Nutting Truck Company, floor truck specialists since 1891. Our reputation for quality products and fair prices has made this concern the largest exclusive makers of floor trucks in the world. This truck is constructed of heavy, long-wearing hardwood frame and braces. Dowel jointed. Steam-bent handles. Heavy, smooth, flat-face wheels; rolled steel axle.

"The Handiest Thing in the Place"

That's what your men will say about this truck. It will make them more contented, relieving them of the hard work of dragging piles of cases from place to place. It's the quick, easy way to move cases of bottles to or from your conveyor, your bottle washer or your wagons. It gives you a safe, rapid means for moving cases of filled bottles from the filling machines to the refrigerator. *It's the handiest way for hauling three or more cases anywhere in the plant.*

Eliminates the last job of drudgery in the large plant. Indispensable in the small plant.

15 Day Trial Offer

Order a Nutting Milk Case Truck at our risk. Use it for 15 days entirely at our expense. If it does not make case handling the easiest instead of the hardest job in the place, if it does not save time and money every day, if it doesn't entirely satisfy you—send it back "collect." We know we are safe in this offer—that you will find it one of the best buys you ever made!

Save Your Back!

No longer is there any need for the back-breaking work of dragging piles of milk cases around your plant.

Nutting Milk Case Truck

This patented truck rolls eight cases of bottles with less time and effort than a man can drag three. It has no nose to pry under or pull out from a pile of heavy cases.

No pushing back of cases to load or unload, no storage space wasted—the Nutting puts the cases **close-up** without an extra shove. **The only floor truck ever made to handle milk cases speedily and economically.**

Note These Features

Rack holds cases at easiest angle

Steam bent handles

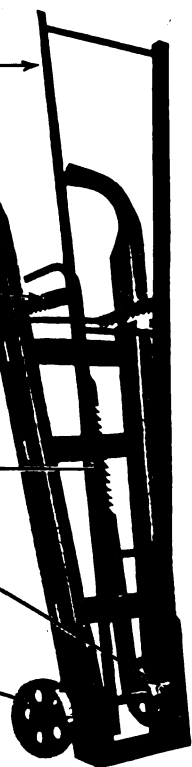

Heavy hardwood frame

Rack Adjustment Teeth to instantly set rack at proper angle

Adjustment Bar with teeth to set Hook at proper height for any milk case made

Adjustable Hook fits hand-hole of any milk case made

Large heavy flat-face wheels set for proper balance of truck

Price \$23.80

ONE CAN TRUCK

That's Built RIGHT for Your Work

Ice cream men who have made comparisons say that the Nutting Ice Cream Can Truck is the strongest, best built truck on the market. And they are backing their statements with repeat orders.

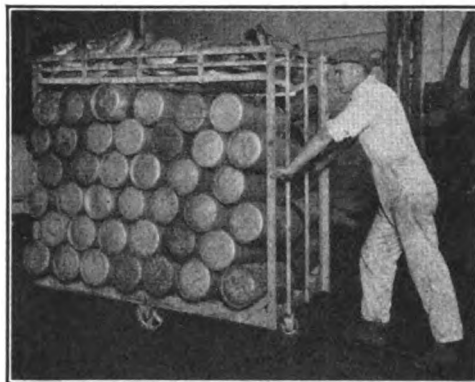

Nutting

Ice Cream Can Truck

has a frame built of heavy structural angle steel riveted like a steel bridge, and specially braced at the corners to withstand shocks. The frame is entirely galvanized, instead of merely coated with aluminum paint.

The main wheels are 8¼ inches high, with wide, flat face, smoothly machined to save the floors. Cold rolled steel axle, heavy axle collars and boxes.

These features of strength give you a truck that will stand years of hard, daily use and freedom from repairs.

The Easily Handled Truck—ball bearing swivel casters. Balance type, for quick turning. Rail around top holds all covers and keeps them with cans. Wooden bars at bottom fully protect cans from denting.

Note Reduced Prices

Nutting Ice Cream Can Trucks earn their reasonable cost over and over—by enabling you to **keep your cans on wheels**, the handy, time and labor saving method for both large and small plants.
